BATTERY - POWER

These high tech batteries are manufactured in a special heat-resistant nylon casing with cast brass poles (LI-01 to LI-07). The state of charge of the individual cells is regulated via an inbuilt processor (balancer) and guarantees the highest safety standard in lithium batteries. The batteries are highly versatile thanks to their universal lithium battery size in combination with the adhesive adapter pads (spacers), which are included in the scope of delivery. The use of 10 different types of lithium means that up to 90% of all common motorcycle batteries are covered.

In addition, types LI-01 to LI-08 are incorporated in a waterproof casing. All types are equipped with an LED state of charge indicator. With targeted use, up to 75% of weight can be saved in comparison to standard (lead-acid) batteries.

Perfectly suitable for racing!

» Ready to use

» Extremely light design

» Safe and reliable

» Very low self-discharge

### Accessories

Connection screws

Adhesive adapter pads (Spacers)

Battery	Japan-Code	Volt	Watt	Capacity	Cold cranking amper	Length mm	Width mm	Height mm	Position of terminal	Terminal
<b>LI-01</b>	LTM7L	12,8	2 AH (c10)	120 A (CCA)	24 Wh	107	56	85	0	Screw connector
